                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harlil peptides (I) (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnostics of isease, Down's syndrome, neuroectodermal tumours, astrocytomas, gliobastomas, hypoxia, ischaemia or cerebral infarction. The peptides

                         The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harlil peptides (I) (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   assays, protein and antibody purification, therapeutics or diagnostics assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of
             disease, Down's syndrome, glioblastomas, hypoxia, i
                                                                                                                                                                                                                                                                                              New Harlil peptide sequences of the Neural Thread Protein, useful in therapeutic assays, e.g. as targets for developing drugs for treating Alzheimer's disease; ischemia or cerebral infarction, or for diagnos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABB81513 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                    The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harli1 peptides (I). (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harli1 peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harli1 peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harli1 peptides are useful in binding receive mortain and analysished nortain therapeutic assay.
                                                                                                                        assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of
                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 29;

(I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harli1 peptide sequences can be used as analogues for NTP in therapeutic or diagnostic cassays by replacing NTP with the peptide in such an assay. The Harli1 peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harli1 peptides are useful in binding cassays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnostics are also useful as a trap that in farction. The peptides are also useful for diagnostics. The peptides are also useful for the treatment of these diseases as targets for drug development for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT

The Harili peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harili peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harili peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuropectodermal tumours, astrocytomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disease, Down's syndrome, neuroectodermal tumours, astrocy glioblastomas, hypoxia, ischaemia or cerebral infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 29;

                                                                                                                                                                                                                                                                                                                                                        망
                                                                                                                                                                                                                                                                                                                                                                                 QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harili peptides (I). (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harili peptide caseays by replacing NTP with the peptide in such an assay. The Harili peptides are also useful as a trap material in a diagnostic tharapeutic assays. Therefore, the Harili peptides are useful in binding tharapeutic assays, proteath and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnostics of disease, Down's syndrome, neuroectdocrmal tumours, astrocytomas, caseays, hypoxia, ischaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activitles, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease. Promo's surprome neurocatodommal termonics.
                                                                                                                           New Harlil peptide sequences of the Neural Thread Protein, useful therapeutic assays, e.g. as targets for developing drugs for treat Alzheimer's disease, ischemia or cerebral infarction, or for diagrams.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peare also useful as targets for drug development for the treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harli1 peptides (I).
                                                                                Claim

The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosting Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemla or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of these diseases. The present sequence represents a specifically claimed peptide from the present invention.
                                                                                                      The present invention describes a method of producing T cell epitopes, involving subjecting a precursor peptide to the action of a 20S proteasome, in order to locate the C-terminos of said epitope. This can be used in the production of vaccines, which can then be used to provoke a T cell response in the treatment of diseases such as cancer and infections. The present sequence is a peptide described in the
                                                                                                                                                                                                        Disclosure; Page 43; 102pp;
                                                                                                                                                                                                                                 Selecting and/or producing a T cell epitope useful in a vaccine comprises subjecting a precursor peptide or polypeptide to the action of a 20S proteasome to determine the location of the C-terminus -

                                                                                                                                                                                                                                                                     The present invention describes a method of producing T cell epitopes, involving subjecting a precursor peptide to the action of a 20S proteasome, in order to locate the C-terminus of said epitope. This can be used in the production of vaccines, which can then be used to provoke a T cell response in the treatment of diseases such as cancer and infections. The present sequence is a peptide described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                  Selecting and/or producing a T cell epitope useful in a vaccine comprises subjecting a precursor peptide or polypeptide to the of a 20S proteasome to determine the location of the C-terminus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method of producing T cell epitopes, involving subjecting a precursor peptide to the action of a 20S proteasome, in order to locate the C-terminus of said epitope. This cabe used in the production of vaccines, which can then be used to provo a T cell response in the treatment of diseases such as cancer and infections. The present sequence is a peptide described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Selecting and/or producing a T cell epitope useful in a vaccine comprises subjecting a precursor peptide or polypeptide to the action of a 20S proteasome to determine the location of the C-terminus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

The present sequence represents a peptide ligand which binds to human MUC1 protein. MUC1 is an epithelial cell mucin, which is found on, and shed from, the surface of many tumours. MUC1 peptide ligands were isolated using a phage display technique using MUC1 tandem repeats as the target. The MUC1 tandem target repeats comprise repeats of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a neural thread protein (NTP) peptide CC having an amino acid sequence selected from ABB81511 to ABB81529 and CC their homologues, which are referred collectively as Harlil peptides (I). CC (I) have neuroprotective, nootropic, vasotropic and cerebroprotective cc activities, and can be used in peptide therapy. The Harlil peptide CC sequences can be used as analogues for NTP in therapeutic or diagnostic cc assays by replacing NTP with the peptide in such an assay. The Harlil ceptides are also useful as a trap material in a diagnostic or CC therapeutic assay. Therefore, the Harlil peptides are useful in binding CC assays, protein and antibody purification, therapeutics or diagnostics. CC disease, Down's syndrome, neuroectodermal tumours, astrocytomas, CC disease, Down's syndrome, neuroectodermal infarction. The peptides are also useful as targets for drug development for the treatment of these diseases. The present sequence represents a specifically claimed CC peptide from the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed CC constitute for the present sequence represents a specifically claimed constitute for the present sequence represents a specifically claimed constitute for the present s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                           The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB815129 and their homologues, which are referred collectively as Harlil peptides (I). (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnostics of disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      peptide AAB31258. The ligands are useful for detecting the presence of MUC1 in a sample, to treat or prevent cancer associated with MUC1 and to prepare a medicament or diagnostic agent to treat, prevent or detect cancer associated with MUC1. By assaying for the binding between the MUC1 ligand and MUC1 in a sample diagnosis or monitoring of cancer can be carried out. The ligands may also be used to prepare antibodies.
                                                 glioblastomas, hypoxia, ischaemia or are also useful as targets for drug of these diseases. The present sequence
                                                                                                                                                                                                                                                                                                                                                   New Harlil peptide sequences of the Neural Thread Protein, useful therapeutic assays, e.g. as targets for developing drugs for treathlabelmer's disease, ischemia or cerebral infarction, or for diagonal transfer of the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-MAY-2002

                                                                           The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABBB1512 and their homologues, which are referred collectively as Harili peptides (I).

(I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harili peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harili peptides are also useful as a trap material in a diagnostic or therapeutic cassay. Therefore, the Harili peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABB81532 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
Human; single nucleotide polymorphism; SNP; paternity test; forensic test; aberrant protein expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          meningitis, muscular disorders, dementia, neurological diseases, tuberous sclerosis, male infertility, hypercalcaemia, blood pressure disorders, osteoporosis, pathogenic infections, hypercholesterolaemia, obesity or autoimmunity. The present sequence is a pepttide encoded by a polymorphism-containing oligonucleotide fragment of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to human nucleic acids containing single nucleotide polymorphisms (SNPs). These can be used in forensic and paternity tests, and to aid in the treatment of diseases associated with aberrant protein expression, including cancer, amyloidosis, diabetes, Alzheimer's disease, Down's syndrome, oedema, lupus (SLE), vasculitis, glomerulonephritis, haemolytic anaemia, thrombocytopaenia, arthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     their homologues, which are referred collectively as Harlil peptides (I (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harlil peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harlil peptides are also useful as a trap material in a diagnostic or disgnostic or therapeutic assay. Therefore, the Harlil peptides are useful in binding assays, protein and antibody purification theraponetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, isohaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of these diseases. The present sequence represents a specifically claimed
                                                                                                                                                                                                                                                                                                                                                                                                          Human papillomavirus Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                El; antiviral; virucide; cytostatic; antiproliferative; dermatol preneoplastic lesion; neoplastic lesion; cutaneous lesion; wart; epidermodysplasia verruciformis; anorectal carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

(A) has antiviral, virucide, CC cytostatic, antiproliferative and dermatological activities. Methods CC from the present invention can be used to treat PV-induced conditions CC including growth of PV preneoplastic and neoplastic lesions, cutaneous CC lesions chosen from warts and other benign cutaneous lesions, plantar CC warts (verruca plantaris), common warts (verruca plana), Butcher's CC common warts, flat warts, genital warts (condyloma acuminatum) and CC epidermodysplasia verruciformis, laryngeal, oral, pharyngeal, oesophageal and other upper airway papilloma or vaginal, cervical, CC used to treat epithelial and internal fibropapillomas in animals. The E2 inhibitors may also be CC used to treat epithelial and internal fibropapillomas in animals. The E2 inhibitors may also be CC exemplification of the present a peptide sequence used in the

The present invention describes a neural thread protein (NTP) peptide having an amino acid sequence selected from ABB81511 to ABB81529 and their homologues, which are referred collectively as Harili peptides (I) (I) have neuroprotective, nootropic, vasotropic and cerebroprotective activities, and can be used in peptide therapy. The Harili peptide sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harili peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harili peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequences can be used as analogues for NTP in therapeutic or diagnostic assays by replacing NTP with the peptide in such an assay. The Harill peptides are also useful as a trap material in a diagnostic or therapeutic assay. Therefore, the Harill peptides are useful in binding assays, protein and antibody purification, therapeutics or diagnostics. In particular, the peptides are also useful for diagnosing Alzheimer's disease, Down's syndrome, neuroectodermal tumours, astrocytomas, glioblastomas, hypoxia, ischaemia or cerebral infarction. The peptides are also useful as targets for drug development for the treatment of these diseases. The present sequence represents a specifically claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;
                                                                                                                                                                                                                                                                                                                                                                           Claim

                                                                                                                                                                                                                                                                                                                           The present sequence is that of the peptide region of a Type I polyketide synthase (PKS) that is encoded by a DNA polylinker incorporating Nsii, Bsu361, NheI and HpaI restriction enzyme sites. The polylinker is inserted into the reductive loop of module 2 of the avermectin PKS gene. The invention relates to nucleic acid molecules encoding at least part of a Type I PKS. These have a polylinker with multiple restriction enzyme sites in place of 1 or more PKS genes encoding enzymes associated with reduction. Also provided are PKS in which the reductive loop in a selected module of the Type I PKS is replaced with the equivalent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a novel family of polypeptides, designated the yjeQ family. These polypeptides are required for the growth of both gram negative and gram positive bacteria. The yjeQ polypeptides and polynucleotides can be used in a method to identify antagonists and antibacterial compounds. These antagonists and compounds can be used to treat bacterial infections. New antibiotics are urgently needed, as serious bacterial infections and antibiotic resistant strains are becoming increasingly prevalent. The polypeptides of the invention targets for antibiotics. The present sequence represents a yjeQ family
The invention relates to a new synthetic polypeptide (I) comprising several different segments of at least one parent polypeptide linked together in a different relationship relative to their linkage in the
                                                                                                                                                 New synthetic polypeptides having several different segments of at least one parent polypeptide linked together differently compared the linkage in the parent polypeptide, for inducing immune response against a pathogen or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;

Also included are a CC synthetic polynucleotide encoding and a computer system for CC designing the synthetic polypeptides. The synthetic polypeptide and CC polynucleotides are referred to as a Savine. The synthetic polypeptide is CC useful for modulating immune responses preferably directed against a CC pathogen or a cancer, (e.g., cancers of the lung, breast, ovary, cervix, CC colon, head and neck, pancreas, prostate, stomach, bladder, kidney, bone CC liver, oesophagus, brain, testicle, uterus), as potentiating agents. CC compositions comprising the polypeptide may be used in the treatment or prophylaxis against viral (such as infections caused by HIV (human CC virus, Epstein-Barr virus and respiratory syncytial virus), bacterial CC (e.g., infections caused by Neisseria, Meningococcal, Haemophilus, CC Salmonella, Streptococcal, Legionella and Mycobacterium or parasitic CC (e.g., infections caused by Plasmodium, Schistosoma, Leishmania, CC Trypanosoma, Toxoplasma and Giardia) infections. The present construct a savine of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              described are: (1) plasmids or baculovirus transfer vectors that contain (1); and (2) recombinant protein (IV) consisting of the A and B chains of (II) joined by the specified linker. (IV), produced by expression of (II) joined by the specified linker. (IV), produced by expression of (I) in host cells, are used to inhibit or kill diseased cells that produce (III), particularly for treating cancers (e.g. leucocyte proliferation; cancer of ovary, pancreas, breast or prostate; glioma) or infections caused by fungi, parasites (e.g. malaria) or viruses (e.g. cytomegalovirus (CMV), herpes, hepatitis, rhinovirus, laryngeotracheitis, cytomegalovirus (CMV), herpes, hepatitis, rhinovirus, laryngeotracheitis, colomegalovirus (CMV), herpes, hepatitis, rhinovirus, laryngeotracheitis, colomegalovirus (II) express, also cystic fibrosis and multiple sclerosis. Alternatively, (I) is used to express (IV) in vivo. (IV) is toxic specifically for (III) expressing cells and does not depend for specificity on a cell-binding component. When used to treat virus infected cells, transcytosis and cytotoxicity of (IV) are increased by retrograde translocation from endoplasmic reticulum to cytoplasm (which safety are further improved. (IV) are not toxic until chain A is released and this occurs only in target cells. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

Also cleavage recognition site for a disease-specific protease (III).

The polynucleotides and proteins can be are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases, hyperproliferative disorders e.g. neoplasms and cancers of the breast or liver, cardiovascular disorders, infections caused by bacteria, viruses and fungi and ocular disorders. The proteins can also be used to aid wound healing and epithelial cell and cancers of the breast or to aid wound healing and epithelial cell and cancers of the breast or to aid wound healing and epithelial cell and cancers of the breast or to aid wound healing and epithelial cell

They are useful for gene discovery, and for encode proteins they are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias in the problem of the method is suitable for the measuring gene expression, with far less bias in the measuring gene expression.

Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly in the sequence of the sequence data for the same of the sequence data for the sequence data for the same of the sequence data for the sequence da
                                                      probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                Single
